Acknowledgements .....	F1
About MHQP .....	G1

## About Your Report

The 2019 MHQP Patient Experience Survey Report (PES Report) summarizes results for your practice site from the 2019 statewide survey of adult and pediatric primary care patients. The 2019 MHQP Patient Experience Survey is based on the CG-CAHPS 3.0 survey developed by the National Committee for Quality Assurance (NCQA) and the Agency for Healthcare Research and Quality (AHRQ), and also includes Patient-Centered Medical Home (PCMH) survey items. The 2019 adult and child Patient Experience Surveys (PES) had 39 items and 54 items, respectively.

The survey was fielded in the spring of 2019 and sampled patients from 771 adult and 315 pediatric primary care practices statewide, representing over 4,000 primary care providers (PCPs). Results for adult and pediatric primary care are reported separately.

Answers to the survey questions were combined to create summary measures of patients' experiences:

### ***Quality of Doctor-Patient Interactions***

- Communication
- Integration of Care
- Knowledge of the Patient
- Adult Behavioral Health (Adult reports only)
- Pediatric Preventative Care (Pediatric reports only)
- Pediatric Growth and Development (Pediatric reports only)

### ***Organizational Features of Care***

- Organizational Access
- Self-Management Support
- Office Staff

Your report also includes the results from the global rating item "Willingness to Recommend to Family and Friends."

Sample sizes were estimated according to the number of providers at a practice in order to obtain reliable information at the practice site level.

MHQP will release a public report of the 2019 Statewide Patient Experience Survey results **at the practice level only** in the winter of 2020 on MHQP's website for healthcare consumers, [www.healthcarecompassma.org](http://www.healthcarecompassma.org). Only practices with three or more providers will be included in MHQP's public reporting. **No provider or medical group level results will be reported on MHQP's consumer website, Healthcare Compass.**

## About Your Report

This report contains up to ten sections of results:

- **Visit Month Summary**– This chart provides a distribution of the counts of the most recent visits to your practice.
- **Comparison to Statewide Mean** – This chart graphs patients’ experiences within your practice across the summary measures and the global rating item as compared with the state mean. This section also explains how sample size is determined and provides information about statistical reliability.
- **Summary Performance Chart** – This chart is included in reports for practices with three or more PCPs, these results are publicly reported. The chart indicates a practice’s score in relation to all other practices sampled in Massachusetts. The summary performance measures in this chart are consistent with MHQP’s previously reported composites, which have been used for public reporting since 2005. The chart reports results for all reported composites and notes which measures will be publicly reported.
- **Priority Matrix** – This chart plots your practice’s relative performance on summary measures with patients’ willingness to recommend your practice on an x/y axis. The chart is designed to help guide decisions about where to focus quality improvement efforts at your practice.
- **Detailed Question-Level Results** – This section provides detailed results for each question and a question level percentile ranking icon to help your practice make question-by-question decisions about quality improvement. Please note that we have added the top box score (i.e., the percentage of patients whose responses reflect the highest possible category/rating for a given question) and the statewide top box score for comparison purposes. This section also summarizes the demographic and health characteristics reported by respondents from your practice. Please note that we have included results for self-reported chronic conditions back into this section.
- **Practice Site Comparative Performance Chart** – If your practice is part of a medical group with at least two other practices included in the survey, your report will also contain a series of charts comparing the performance of your practice with other practices (blinded) in your medical group across the summary measures.
- **Provider-Level Comparative Performance Chart** – If your practice opted to participate in the Provider-Level Survey Program, your report will also contain a series of charts comparing the performance of all the providers in your practice across the summary measures.
- **Trending Data** – This chart displays trending data from 2018 to 2019, reflecting the number of respondents and Composite Scores. The significant difference identifies statistically significant increase or decrease to prior year results.
- **Providers from Your Organization Included in the Survey Report** – This section indicates the names of all providers (PCPs) from your organization whose patients were surveyed as part of the 2019 survey. Information regarding PCPs at each practice site was obtained directly from the practice site or medical group through MHQP’s Massachusetts Provider Database (MPD). All provider rosters used for this survey were updated as of December 31, 2018.
- **Patient Comments** – This section includes patient narratives/comments derived from open-ended questions (CG-CAHPS Narrative Elicitation Protocol-beta version) found on the online survey.

# About Your Report

## Appendices

Your report also contains supplemental material, available in the appendices. The appendices contain the following sections:

- **Selected Tools and References for Quality Improvement** – This section provides links to tools to help practices implement quality improvement efforts and a list of relevant literature.
- **Statewide and Regional Scores** – This section provides regional average scores and the statewide 10th, 25th, 50th, 75th, 80th, 90th and 99th percentile ranking scores for each reported composite.
- **Patient-Centered Medical Home Measurement Chart** – This chart represents Patient-Centered Medical Home (PCMH) composite and item level measures as defined by NCQA. MHQP's standard Communication and Access composites differ slightly from the CAHPS® PCMH composites for the same areas. When CAHPS® PCMH composites are different from MHQP composites, we have also provided PCMH composite results within this section.
- **Questions and Answers** – This section contains a list of commonly asked questions about the MHQP Patient Experience Survey and the corresponding answers.
- **Technical Appendix** – This section contains a description of MHQP's sampling process and benchmark methodology.
- **About MHQP** – This section contains information about MHQP and its role in Massachusetts' quality reporting.

## Table of Publicly Reported Survey Questions - Pediatric Care

### Quality of Provider-Patient Interaction

<i>Summary Measure</i>	<i>Survey Questions</i>
<i>Communication (4 questions)</i>	<p>In the last 12 months, how often did this provider explain things about your child's health in a way that was easy to understand?</p> <p>In the last 12 months, how often did this provider listen carefully to you?</p> <p>In the last 12 months, how often did this provider show respect for what you had to say?</p> <p>In the last 12 months, how often did this provider spend enough time with your child?</p>
<i>Integration of Care (2 questions)</i>	<p>In the last 12 months, how often did the provider named in Question 1 seem informed and up-to-date about the care your child got from specialists?</p> <p>In the last 12 months, when this provider ordered a blood test, x-ray, or other test for your child, how often did someone from this provider's office follow up to give you these results?</p>
<i>Knowledge of Patient (2 questions)</i>	<p>In the last 12 months, how often did this provider seem to know the important information about your child's medical history?</p> <p>How would you rate this provider's knowledge about your child as a person – special abilities, concerns, fears?</p>
<i>Pediatric Preventive Care (6 questions)</i>	<p>In the last 12 months, did you and anyone in this provider's office talk about things you can do to keep your child from getting injured?</p> <p>In the last 12 months, did anyone in this provider's office give you information about how to keep your child from getting injured?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how much time your child spends on a computer and in front of a TV?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how much or what kind of food your child eats?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how much or what kind of exercise your child gets?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about whether there are any problems in your household that might affect your child?</p>

*Child Development  
(5 questions)*

In the last 12 months, did you and anyone in this provider's office talk about your child's learning ability?

In the last 12 months, did you and anyone in this provider's office talk about the kinds of behaviors that are normal for your child at this age?

In the last 12 months, did you and anyone in this provider's office talk about how your child's body is growing?

In the last 12 months, did you and anyone in this provider's office talk about your child's moods and emotions?

In the last 12 months, did you and anyone in this provider's office talk about how your child gets along with others?

**Organization/Structural Features of Care**

<b>Summary Measure</b>	<b>Survey Questions</b>
<i>Organizational Access (3 questions)</i>	<p>In the last 12 months, when you called this provider's office for an appointment for care your child <b>needed right away</b>, how often did you get an appointment as soon as your child needed?</p> <p>In the last 12 months, when you made an appointment for a <b>check-up or routine care</b> for your child with this provider, how often did you get an appointment as soon as your child needed?</p> <p>In the last 12 months, when you called this provider's office during regular office hours, how often did you get an answer to your medical question that same day?</p>
<i>Self-Management Support (2 questions)</i>	<p>In the last 12 months, did you and anyone in this provider's office talk about specific goals for your child's health?</p> <p>In the last 12 months, did anyone in this provider's office ask you if there are things that make it hard for you to take care of your child's health?</p>
<i>Office Staff (2 questions)</i>	<p>In the last 12 months, how often were the front office staff at this provider's office as helpful as you thought they should be?</p> <p>In the last 12 months, how often did the front office staff at this provider's office treat you with courtesy and respect?</p>

**Global Rating**

<b>Summary Measure</b>	<b>Survey Questions</b>
<i>Willingness to Recommend (1 question)</i>	Would you <b>recommend</b> this provider to your family and friends?

**North Shore Pediatrics - Pediatric Care**  
**Northeast PHO, Inc.**  
Month of Visit Summary

We created a relative recency distribution based on the count of visits to the practice by those who responded to the survey.

There were a total of 100 patients who responded to the survey; 77.00% had seen the provider/practice within the last 6 months (July - December 2018). Please note that across the state, 70% of survey respondents had their most recent primary care visit between July and December 2018 which is within the 6 month lookback period.

## Comparison to Statewide Mean

The summary chart displays your mean score and a comparison of your mean score to the Statewide Mean for each of the summary measures. The information below is provided to help you interpret the chart. MHQP will release a public report of the 2019 Statewide Patient Experience Survey results **at the practice level only** in the winter of 2020 on MHQP's website for healthcare consumers, [www.healthcarecompassma.org](http://www.healthcarecompassma.org). Only practices with three or more providers will be included in MHQP's public reporting. No provider or medical group level results will be reported on MHQP's consumer website, Healthcare Compass.

### Sample Size

The number of your patients responding to the survey is indicated in the title of the chart. Sampling design considers how many primary care providers are in each practice and the number of respondents needed to achieve highly reliable results. For private reporting, results are included for practices with at least 16 respondents. This minimum threshold allows practices to receive some information from the survey, even when sample sizes are limited. For provider level reports, results are included for providers with at least seven respondents. There are no minimum thresholds for the reporting of medical groups or networks. Please consider each measure's reliability score (explained below) and refer to advice contained in the Reliability Legend when determining how to use results.

### Reliability

In the chart, each measure has a reliability score listed under the site mean in parentheses. The Reliability Legend below the chart serves as a guide to interpret reliability scores. Reliability (*r*) is a statistical measure that indicates how accurately a measure captures information by measuring the consistency of the information provided by patients who responded to the survey. Reliability scores range from 0.0 to 1.0 – where 1.0 signifies a measure for which every patient reports an experience identical to every other patient and where 0.0 signifies a measure for which there is no consistency or commonality of experiences reported by patients. Reliability is strongly influenced by sample size. The sample size is determined by the number of respondents needed to achieve results with highest site-level reliability.

### Mean Scores Used for Comparison

The *Statewide Mean* represents the statewide average score including all respondents to the 2019 Patient Experience Survey and can be used as a benchmark for comparison to your own score. We also list your adjusted mean score. Your scores have been case-mix adjusted so that patient characteristics match the overall characteristics of patients throughout the state as reflected in the statewide results, creating a fair comparison of performance. Results data are adjusted according to age, gender, education, race, language, health plan, and region.

### Statistical Significance

Using symbols to note the mean score for each measure, the chart indicates whether scores are statistically above, equivalent, or lower than the Statewide Mean. The p-value ( $p \leq 0.05$ ) expresses that there is a 95% probability that the score represents “true” performance relative to the Statewide Mean score (indicated by a vertical line).

### Confidence Interval

A confidence interval represents the range of scores within which you can be confident that your “true” mean score falls. The confidence interval is represented by the horizontal bar around each measure's reported mean score. For the purposes of this report, there is 95% estimated probability that your “true” mean score falls within the reported confidence intervals (also expressed as  $p \leq 0.05$ ).

# North Shore Pediatrics - Pediatric Care

## Northeast PHO, Inc.

Patients' Experiences with Your Practice Site (n = 100)

Compared with the Statewide Mean

Summary Measures	Comparison to State Mean	Site Mean (Reliability <i>r</i> )	State Mean
<i>Quality of Provider-Patient Interaction</i>	0 20 40 60 80 100		
Communication		98.8 (Lower <i>r</i> )	97.4
Integration of Care		94.8 (Lower <i>r</i> )	89.2
Knowledge of Patient		96.6 (High <i>r</i> )	93.6
Pediatric Preventive Care		81.3 (Highest <i>r</i> )	75.8
Child Development		83.1 (High <i>r</i> )	80.0
<i>Organization/Structural Features of Care</i>	0 20 40 60 80 100		
Organizational Access		95.8 (Highest <i>r</i> )	93.4
Self-Management Support		56.9 (High <i>r</i> )	52.7
Office Staff		90.2 (Highest <i>r</i> )	92.6

Comparison Symbol Legend	
<i>Benchmark...</i>	
	Statewide Mean
<i>Your score...</i>	
	Statistically significantly above the benchmark ( $p \leq 0.05$ )
	Statistically equivalent to the benchmark
	Statistically significantly below the benchmark ( $p \leq 0.05$ )
<i>Confidence Interval...</i>	
	95% confidence interval around the adjusted mean ( $p \leq 0.05$ )

Reliability Legend	
<b>Highest <i>r</i> <math>\geq .70</math></b>	Available sample for this measure meets or exceeds reliability standards required for public reporting.
<b>High <i>r</i> .50 to .70</b>	Available sample for this measure is slightly less than optimal. Your performance relative to the state average is very likely correct, but your actual score could differ somewhat in a sample including a larger number of your patients. Results are provided for your information only and will not be reported publicly.
<b>Lower <i>r</i> .34 to .50</b>	Available sample size for this measure is less than optimal. Your performance relative to the state average is likely correct, but your actual score could vary considerably in a sample including a larger number of your patients. Results are provided for your information only and will not be reported publicly.
<b>Lowest <i>r</i> <math>&lt; .34</math></b>	Available sample for this measure is too small to provide a useful estimate of your performance or your position relative to other practices statewide.

## Summary Performance

### Publicly Reported Measures

MHQP will publicly report the results of the summary measures in the winter of 2020 on MHQP's website for healthcare consumers, [www.healthcarecompassma.org](http://www.healthcarecompassma.org). Only practice level results will be publicly reported. For each of these measures, the performance chart indicates your score as compared with two statewide benchmarks, and the performance category that will be reported for your practice on MHQP's public website. The global rating item "Willingness to Recommend" will be publicly reported on MHQP's website as a frequency distribution.

### Performance Benchmarks

Performance benchmarks have been set in two ways. For some measures, performance categories are based on the Beta-Binomial methodology and set at the 20th and 80th percentiles. Another method, known as the Hochberg methodology, is used for differentiating performance for measures with high or low performance and little variation across the majority of practices being reported. Performance categories for each type of benchmark are as follows:

For composites with benchmarks developed with Beta-Binomial methodology (Adult Knowledge of Patient, Adult Behavioral Health, Adult/Pediatric Organizational Access, Pediatric Preventive Care, and Pediatric Office Staff):

- Below the lower benchmark: Lowest Performance
- Between the lower and upper benchmark: Medium Performance
- Above the upper benchmark: High Performance
- Above the 99th percentile: Special Designation Highest Performance

For composites with benchmarks developed with the Hochberg methodology (Adult/Pediatric Communication, Adult/Pediatric Integration of Care, Adult Office Staff, Pediatric Knowledge of Patient, Child Development, and Adult/Pediatric Self-Management Support):

- Below the Benchmark: Lowest Performance
- Above the Benchmark: High Performance
- Above 99th Percentile: Special Designation Highest Performance

For Adult/Pediatric Self-Management Support:

- Below the Benchmark: Lowest Performance
- Above the Benchmark: Medium Performance
- Above a score of 80: High Performance

### Publicly Reported Measures

All measures with symbols in the column "Performance Category" will be publicly reported.

### Top Performance Designation

For more information on the scores needed to achieve "Highest Performance" designation for each summary measure as well as the statistical methods used to determine these scores, please see the Technical Appendix at the end of this report.

◐	Above the benchmark (Self-Management Support)
○	Below the benchmark
N/D	Not enough data to report performance

## Priority Matrix

The Priority Matrix is a tool to help practices identify potential areas for quality improvement based on the results of the survey. This graph incorporates the patient perspective about the importance of different aspects of care with practice performance as compared to peers:

- The **vertical axis** indicates the percentile rank of practice scores. Practice site case-mix adjusted scores for summary measures are plotted on this scale to display where practice site scores fall in relation to other practices included in the survey. **The higher a measure's score is plotted, the better the performance of the practice is in relationship to other practice sites in the survey for that measure.**
- The **horizontal axis** represents a scale from 0.0 to 1.0 that indicates how strongly patients' "Willingness to Recommend" a practice is correlated with each of the summary measures. "Willingness to Recommend" is one indicator of how highly patients value their experience receiving care at a practice. **The closer to 1.0 a summary measure score is plotted on the horizontal-axis, the stronger the measure is related to patients' willingness to recommend the practice to family and friends.**

The priority matrix depicts two useful pieces of information—1) the vertical axis displays where your scores stand in relation to all other practices included in the survey. The top two quadrants of the priority symbols indicate performance above the 75th percentile while the bottom two quadrants indicate performance below the 75th percentile; and 2) the horizontal axis shows how highly each survey item correlates with patients' willingness to recommend their primary care provider to family members and friends. The right quadrants of the priority symbol indicate the strongest association between the item and a patient's willingness to recommend their primary care provider.

**Quadrant 1: Highest Priority for Improvement.** The practice scored below the 75th percentile and there is a strong correlation between patients' willingness to recommend the practice and the measure(s).

**Quadrant 2: High Priority for Improvement.** The practice scored below the 75th percentile but there is only a moderate or low correlation between patients' willingness to recommend the practice and the measure(s). Measures in Quadrants 1 and 2 represent the most important initial targets for improvement. By highlighting the relationship between relative performance and a key indicator of patient experience, the matrix guides prioritization. However, it is appropriate for practices to evaluate the ordering of priorities (highest vs. higher) and its relevance to the individual practice. There may be a rationale for focusing first on improving performance areas that fall within Quadrant 2.

**Quadrant 3: Lower Priority for Improvement.** The practice scored above the 75th percentile, and there is a strong correlation between patients' willingness to recommend the practice and the measure(s).

**Quadrant 4: Lowest Priority for Improvement.** The practice scored above the 75th percentile and there is a moderate or low correlation between patients' willingness to recommend the practice and the measure(s).

While there may still be opportunities for performance improvement in measure areas falling within Quadrants 3 and 4, improvement strategies for these measures should likely be developed after poorer performance areas have been targeted.

# North Shore Pediatrics - Pediatric Care

## Northeast PHO, Inc.

Summary Performance (n = 100)

### Priority Matrix

Correlation to Measure of Willingness to Recommend

#### Priority Matrix Legend - Composites with Beta-Binomial Benchmark

##### Quality of Provider-Patient Interaction

① Pediatric Preventive Care

##### Organization/Structural Features of Care

② Organizational Access

③ Office Staff

As previously noted, practices' performance is very high overall for some measures and therefore cannot be plotted on the Priority Matrix. However, these measures are important to patients and very highly correlated to the global indicator Willingness to Recommend. **Practices below the lower Summary Performance benchmark should include these measures as high priority for quality improvement.**

## North Shore Pediatrics - Pediatric Care

### Northeast PHO, Inc.

#### Question Response Frequencies for Your Patient Survey Sample

To assist you in interpreting the summary scores shown on the previous graphs, your individual results for each survey question are provided below. These results show the distribution of your patients' responses to each survey question across the continuum of response options available for that question. Each question is shown as part of the measure in which it was scored.

A common method of indicating relative performance is to rank order all scores and compare each individual score relative to those of all others being measured in the same way. For example, if your result was ranked at the 34th percentile for the survey question that asks if a provider explained information in an understandable way to the patient, it means that 34% of the practices/providers in the state achieved a lower score on this item than you did. Conversely, 66% achieved better scores than yours. Hence, this item would indicate a need to improve on how information is explained to the patient.

The item-level percentile rankings are visually displayed using a color coding schematic with red representing the lowest percentile rankings and yellow depicting low (below 50%) percentile rankings. Note that visuals appear only next to items where your scores fall at or below the state's 50th percentile for that particular item. No percentile rankings are given for any providers for items within the Communication composite as scores on that domain are extremely high across the state. The horizontal line indicates your percentile ranking in relation to the scores received by all the practices/providers in the state of Massachusetts surveyed for that item.

When selecting quality improvement strategies, you may wish to focus on priority composites. If your percentile ranking for a given item that is part of a priority composite places you in the red zone, this area will be a priority for improvement. If a second item in that same composite places you in the yellow zone, it would become a priority once all red zone items in the same composite were addressed.

Your Percentile Score

CG-CAHPS survey items can be calculated using a top-box scoring method. The "top-box" is the most favorable response to the survey item. The top box score is the percentage of patients whose responses reflect the highest possible category/rating for a given question (e.g., percentage who indicated that they "always" received the desired care or service). We include top box scores so that you can easily identify areas of outstanding patient experiences and conversely areas of low performance to achieve higher goal setting. We have also included statewide top box scores for comparison purposes.

#### Communication (4 items) Adjusted Mean Score = 98.8

In the last 12 months, how often did this provider explain things about your child's health in a way that was easy to understand?

 Comparative Performance Charts

The symbols and reliability definitions illustrated below relate to each of the Comparative Performance Charts appearing on the following pages. These charts are being provided for internal use by your organization for quality improvement. It is important to note that while the adjusted mean score is presented for each reported entity as a point of reference, any comparison based on the adjusted mean score is not a meaningful way to differentiate one from another and will result in an unacceptably high risk of misclassification.

In using these charts for quality improvement purposes, it is the symbol indicating performance relative to the benchmark that should be considered in interpreting performance. Therefore, results are grouped according to whether the adjusted mean score achieved for the measure is significantly above (green triangle), no different than (blue circle), or significantly below (red triangle) the benchmark.

Comparison Symbol Legend	
	Statistically significantly above the benchmark ( $p \leq 0.05$ )
	Statistically equivalent to the benchmark
	Statistically significantly below the benchmark ( $p \leq 0.05$ )

As an additional point of reference for interpreting these results, the charts also include the sample size and reliability of the measure for each reported entity. Please refer to the reliability definitions in the table below to interpret reliability numbers. Smaller sample sizes lead to larger confidence intervals around adjusted mean scores and may decrease the likelihood of capturing differences in performance that are statistically significant.

Reliability Legend	
<b>Highest <math>r</math></b> <b><math>\geq .70</math></b>	Available sample for this measure meets or exceeds reliability standards required for public reporting.
<b>High <math>r</math></b> <b>.50 to .69</b>	Available sample for this measure is slightly less than optimal. Your performance relative to the state average is very likely correct, but your actual score could differ somewhat in a sample including a larger number of your patients. Results are provided for your information only and will not be reported publicly.
<b>Lower <math>r</math></b> <b>.35 to .49</b>	Available sample size for this measure is less than optimal. Your performance relative to the state average is likely correct, but your actual score could vary considerably in a sample including a larger number of your patients. Results are provided for your information only and will not be reported publicly.
<b>Lowest <math>r</math></b> <b><math>\leq .34</math></b>	Available sample for this measure is too small to provide a useful estimate of your performance or your position relative to other practices statewide.

*Note: Primary Care Providers not eligible for provider level sampling are not displayed in the provider comparison charts. A minimum threshold of 20 patients, attributed through claims visit data from participating commercial health plans, was required for a provider to be included in provider level sampling.*

# Patient Comments Report

The inclusion of open-ended questions that elicit comments from survey respondents can add meaningful information to quantitative data. Patients often want to elaborate on their particular experiences of care and this forum enables them to delve into personal and specific issues that may not be elicited from close-ended survey questions. Today's patients are already reporting their health care experience on the internet in blogs, social networks, and on health care rating websites.

MHQP routinely captures this free-text information in a systematic way. Specifically, we incorporate the beta version of the CAHPS® Narrative Elicitation Protocol, which is a set of open-ended questions that prompt survey respondents to tell a clear and comprehensive story about their experience with a health care provider. The ultimate objective of obtaining patient comments is to provide additional textured information to help providers and practices understand what they can do to improve their care and/or continue with strategies that are positively impacting patients' experiences. In the 2019 survey, patients who responded to the survey electronically are presented with the following:

## **In Your Own Words**

Please answer the following questions to provide detailed feedback about the care, treatment, and services you receive from your [child's] provider. Your [child's] provider can use this information to know what is working well or what may need improvement.

*You should not use your comments in place of a visit, phone call, or to seek advice from your [child's] provider. Your comments will never be matched to your name. These comments may be shared with your [child's] provider and may be reported publicly.*

## Items in the Adult Version of the Patient Narrative Elicitation Protocol

In your own words, please describe your experiences with this provider and his or her office staff, such as nurses and receptionists.

1. What are the most important things that you look for in a healthcare provider and the staff in his or her office?
2. When you think about the things that are most important to you, how do your provider and the staff in his or her office measure up?
3. Now we'd like to focus on anything that has gone well in your experiences in the last 12 months with your provider and the staff in his or her office. Please explain what happened, how it happened, and how it felt to you.
4. Next we'd like to focus on any experiences in that last 12 months with your provider and the staff in his or her office that you wish had gone differently. Please explain what happened, how it happened, and how it felt to you.
5. Please describe how you and your provider relate to and interact with each other.

## Items in the Child Version of the Patient Narrative Elicitation Protocol

In your own words, please describe your experiences with this provider and his or her office staff, such as nurses and receptionists.

1. What are the most important things that you look for in your child's healthcare provider and the staff in his or her office?
2. When you think about the things that are most important to you, how do your child's provider and the staff in his or her office measure up?
3. Now we'd like to focus on anything that has gone well in your experiences in the last 12 months with your child's provider and the staff in his or her office. Please explain what happened, how it happened, and how it felt to you.

## Patient Comments Report

4. Next we'd like to focus on any experiences in that last 12 months with your child's provider and the staff in his or her office that you wish had gone differently. Please explain what happened, how it happened, and how it felt to you.
5. Please describe how you and your child's provider relate to and interact with each other.
6. Please describe how **your child** and his or her provider relate to and interact with each other.

MHQP continues to explore and seek ways to collate and display narrative content so that it is usable and actionable for health care providers. The patient comments in this report are categorized into three sections: comments provided by patients who gave the most favorable overall ratings to the provider, comments provided by patients who gave neutral overall ratings to the provider, and comments from patients who gave the least favorable overall ratings. Comments are classified by two global ratings: overall Provider Rating (based on a 10-point scale) and Willingness to Recommend (based on a 5-point scale). Please see the actual wording of these items and legend below for more detail.

### Categories

**Most Favorable overall ratings** = Provider Rating= 9-10 and Willingness to Recommend= 5

**Neutral overall ratings** = Provider Rating= 4-8 and Willingness to Recommend= 2-4

**Least favorable overall ratings**=Provider Rating= 0-3 and Willingness to Recommend= 1

### Global Rating Items

#### Provider Rating

Using any number from 0 to 10, where 0 is the worst provider possible and 10 is the best provider possible, what number would you use to rate this provider?

- 0
- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10

#### Willingness to Recommend

Would you **recommend** this provider to your family and friends?

- Definitely yes=5
- Probably yes=4
- Not sure=3
- Probably not=2
- Definitely not=1

**Most Favorable overall ratings**

***What are the most important things that you look for in your child's healthcare provider and the staff in his or her office?***

- ⊕ Empathetic, knowledgeable, open long hours.  
-----
- ⊕ Empathy and easy to talk to.  
-----
- ⊕ The time they spend with my child and how attentive they are.  
-----
- ⊕ Attentive to the patient's questions and concerns and the ability to share information and listen to the patient.  
-----
- ⊕ Knowledge, friendliness, and patience.  
-----
- ⊕ Attention to detail regarding the health of my child  
-----
- ⊕ Prompt attention to calls, questions, & concerns. knowledgeable, empathetic staff  
-----
- ⊕ Kind, knowledgeable, easy to talk to and comfortable to ask questions to, approachable, available, good listeners and letting me know i am heard.  
-----
- ⊕ Response time to questions, access to appointments immediately, caring  
-----
- ⊕ First and foremost, I look for my child's healthcare provider to be knowledgeable about things that pertain to my child's health (physically, mentally and emotionally) and be willing and able to provide guidance/feedback to me on how best to ensure his health and safety. I also look for the provider to be compassionate, kind and respectful to both my child and me.  
-----
- ⊕ Ease of booking appointments, wait times in the waiting area and the room, personable physician.  
-----
- ⊕ I look for someone who is willing to talk to us and knows my child's history. Someone who is kind and understanding to our families needs.  
-----
- ⊕ Friendly and knowledgeable.  
-----

***When you think about the things that are most important to you, how do your child's provider and the staff in his or her office measure up?***

- ⊕ Yes, they are terrific  
-----
- ⊕ The provider and staff meet expectations.  
-----

North Shore Pediatrics - Pediatric Care  
Northeast PHO, Inc.

Patient Comments Report

- ⊕ Always. Dr. Danis is like family to us at this point- he knows my girls and I and knows how they respond best to him.
- ⊕ The doctor asks questions of the patient and takes the time to listen and share information.
- ⊕ Nearly perfect. Dr.Seman is great, he is good at calming my worries without disregarding them. The Nurses are great and call back quickly.
- ⊕ They are friendly and knowledgeable.
- ⊕ Excellent. We cannot say enough good things about this practice!
- ⊕ Excellent - beyond my expectations
- ⊕ They meet and/or exceed all my expectations on all levels. I couldn't say more about how wonderful my son's provider and the staff have been since my son was born.
- ⊕ They are exceptional! I wouldn't go anywhere else!!

***Now we'd like to focus on anything that has gone well in your experiences in the last 12 months with your child's provider and the staff in his or her office. Please explain what happened, how it happened, and how it felt to you.***

- ⊕ Our son has a [IDENTIFIER REMOVED] that requires us to monitor any fever very closely to ensure it's not related to a UTI. We brought him in with a very high fever (102+) and Dr. Danis was thorough but calm in his evaluation. He ensured we tested for anything that could possibly be causing the fever (aside from a [IDENTIFIER REMOVED]) before jumping to the conclusion that we needed to obtain a [IDENTIFIER REMOVED] sample. It turns out our little one had [IDENTIFIER REMOVED]. He was immediately prescribed antibiotics. After 48 hours, our son's fever still hadn't broken. When I called the office, a nurse called us back almost immediately with what to look for, what was within the "normal" range and gave us our next steps should the fever not break. It did, thankfully! However, Dr. Danis personally called to follow-up and ensure it had and that our son was on the mend. I felt relieved, of course, that our son was better but also so grateful to Dr. Danis and his staff for their expertise, guidance and support. They are truly exceptional
- ⊕ Quick replys to questions, always get an appointment when needed, kind and understanding staff.
- ⊕ All of the staff is great!
- ⊕ &lt;y child's provider has gone above and beyond to assist both of my children throughout the course of their care to ensure that they are always the number one priority
- ⊕ Attentive to concerns about my child's heart health (there was a heart murmur detected). Handled very well, all referrals are easy when needed.

Patient Comments Report

✚ Dr. Goodman is fantastic. He's a genuinely good person who truly cares about his patients and families.

✚ My daughter had had a fever for a few days I called the office they told me to bring her right in. I thought it might be an ear infection (she had no symptoms, mild coughing) She is 2 and they really took the time to listen to her check her and listen to her lungs. They diagnosed her with pneumonia and quickly started her on abx, they also gave me good advice for caring for her. I believe that their ability to diagnose her and treat her quickly kept her from becoming sicker or being hospitalized and for that I am grateful. A women I work with's 2 year old grandson died of pneumonia at the same time and I am so grateful my pediatricians office treated and diagnosed her so quickly.

✚ My oldest has severe anxiety. Dr. Danis is always great with her!

✚ Nothing comes to mind. They are very attentive and helpful. Dr Danis is very good.

***Next we'd like to focus on any experiences in that last 12 months with your child's provider and the staff in his or her office that you wish had gone differently. Please expalin what happened, how it happened, and how it felt to you.***

✚ I honestly can't think of any.

✚ I would prefer to discuss my child's conditions/issues with the nurse or provider when they return the call and not the office staff. I understand the need to obtain as much information as possible. however it does at times to me seem to cross lines of privacy with the amount of questions asked by the office staff

✚ Nothing comes to mind.

✚ I have actually been very happy with the office experiences I have had this past year.

***Please describe how you and your child's provider relate to and interact with each other.***

✚ Dr Goodman is a very nice doctor who cares about his patients which makes my daughter and I both comfortable to talk to him.

✚ We relate and interact very well. He is not only a fantastic doctor, but he's also a father. He is so fantastic in knowing when to share a story or an experience he's had as a father (as opposed to a doctor) to help ease your mind. I also trust him implicitly when it comes to his medical advise as he's always open, honest and clear in the information/guidance he provides.

✚ Very friendly and understanding

✚ Very easy to talk to one another. He is a caring doctor who we can open up to.

✚ The doctor is very personable and my child feels comfortable in the doctor's office.

Patient Comments Report

incredibly well...there are no complaints on this end

Dr.Seman is very down to earth and also knowledgeable. He wants to know if you have any concerns and acts on anything he thinks is truly concerning. Dr.Seman takes the time to sit and meet with you after the physical to discuss your child. He is easy to talk to.

Very well. Dr Danis has taken care of both of my children for many years

Great- he always comes in and greets me, shakes my hand and addresses any concerns.

Very well. Dr. Goodman is really good at listening to us and explaining things to us.

***Please describe how your child and his or her provider relate to and interact with each other.***

Very well. Dr Danis takes the time to speak directly to them to ask questions.

My daughter feels comfortable talking to the doctor which makes the experience great!

Great- he always comes in and greets her and knows to start quietly to get her comfortable.

Again, incredibly well...there are no complaints on this end

Very kind and relatable

Our son has always been very comfortable with Dr. Danis (big smile when he sees him) and is cooperative (as much as can be expected) during his exams. Dr. Danis is patient and kind with him, which helps put us all at ease.

Dr.Seman is very good at getting my kids to relax so that he can examine and listen to them. My kids never cry when they are with him, he is very good at making them feel comfortable and safe.

Very well. Dr. Goodman is great at interacting with our children.

[Name removed] likes Dr. Seman a lot. He thinks he's funny and enjoys chatting with him during exams.

**Neutral overall ratings**

***What are the most important things that you look for in your child's healthcare provider and the staff in his or her office?***

Thoroughness and access.

Patient Comments Report

***When you think about the things that are most important to you, how do your child's provider and the staff in his or her office measure up?***

- At times it seems there may be a downplaying of the situation to reduce concerns. Which could put less attention on the issue. We want to be over covering things versus under in case there is a more substantial issue.

***Now we'd like to focus on anything that has gone well in your experiences in the last 12 months with your child's provider and the staff in his or her office. Please explain what happened, how it happened, and how it felt to you.***

- Commitment and access.

***Next we'd like to focus on any experiences in that last 12 months with your child's provider and the staff in his or her office that you wish had gone differently. Please explain what happened, how it happened, and how it felt to you.***

- Thoroughness may have been less than needed in the situation. A situation where our child was under diagnosed and had a more severe issue than was initially thought which put her at risk. It made it clear that we should have had a conversation about the 'what if' and what we should be looking for just in case.

***Please describe how you and your child's provider relate to and interact with each other.***

- Relate well and interact well.

***Please describe how your child and his or her provider relate to and interact with each other.***

- Relate well and interact well.

●	Statistically equivalent to the MA Statewide Mean
▼	Statistically significantly below the MA Statewide Mean ( $p \leq 0.05$ )

Reliability Legend	
<b>Highest r</b> ≥ .70	Available sample for this measure meets or exceeds reliability standards for highly reliable estimates of performance.
<b>High r</b> .50 to .70	Available sample for this measure is slightly less than optimal. Your performance relative to the state average is very likely correct, but your actual score could differ somewhat in a sample including a larger number of your patients.
<b>Lower r</b> .34 to .50	Available sample size for this measure is less than optimal. Your performance relative to the state average is likely correct, but your actual score could vary considerably in a sample including a larger number of your patients.
<b>Lowest r</b> <.34	Available sample for this measure is too small to provide a useful estimate of your performance or your position relative to other practices statewide.

## Tables of Survey Questions - Pediatric Care

### PCMH Composite Measures

Summary Measure	Survey Questions
<i>Communication (PCMH)</i> (5 questions)	<p>In the last 12 months, how often did this provider explain things about your child's health in a way that was easy to understand?</p> <p>In the last 12 months, how often did this provider listen carefully to you?</p> <p>In the last 12 months, how often did this provider seem to know the important information about your child's medical history?</p> <p>In the last 12 months, how often did this provider show respect for what you had to say?</p> <p>In the last 12 months, how often did this provider spend enough time with your child?</p>
<i>Pediatric Preventive Care</i> (6 questions)	<p>In the last 12 months, did you and anyone in this provider's office talk about things you can do to keep your child from getting injured?</p> <p>In the last 12 months, did anyone in this provider's office give you information about how to keep your child from getting injured?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how much time your child spends on a computer and in front of a TV?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how much or what kind of food your child eats?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how much or what kind of exercise your child gets?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about whether there are any problems in your household that might affect your child?</p>
<i>Child Development</i> (5 questions)	<p>In the last 12 months, did you and anyone in this provider's office talk about your child's learning ability?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about the kinds of behaviors that are normal for your child at this age?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how your child's body is growing?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about your child's moods and emotions?</p> <p>In the last 12 months, did you and anyone in this provider's office talk about how your child gets along with others?</p>

<p><i>Organizational Access</i> (PCMH) (3 questions)</p>	<p>In the last 12 months, when you called this provider's office for an appointment for care your child <b>needed right away</b>, how often did you get an appointment as soon as your child needed?</p> <p>In the last 12 months, when you made an appointment for a <b>check-up or routine care</b> for your child with this provider, how often did you get an appointment as soon as your child needed?</p> <p>In the last 12 months, when you called this provider's office during regular office hours, how often did you get an answer to your medical question that same day?</p>
<p><i>Self-Management Support</i> (2 questions)</p>	<p>In the last 12 months, did you and anyone in this provider's office talk about specific goals for your child's health?</p> <p>In the last 12 months, did anyone in this provider's office ask you if there are things that make it hard for you to take care of your child's health?</p>
<p><i>Office Staff</i> (2 questions)</p>	<p>In the last 12 months, how often were the front office staff at this provider's office as helpful as you thought they should be?</p> <p>In the last 12 months, how often did the front office staff at this provider's office treat you with courtesy and respect?</p>
<p><i>Communication: Provider Explains Clearly to Child</i> (1 question)</p>	<p>In the last 12 months, how often did this provider explain things in a way that was easy for <b>your child</b> to understand?</p>
<p><i>Communication: Provider Listens to Child</i> (1 question)</p>	<p>In the last 12 months, how often did this provider listen carefully to <b>your child</b>?</p>
<p><i>Communication: Information for Child Follow-Up</i> (1 question)</p>	<p>Did this provider give you enough information about what you needed to do to follow up on your child's care?</p>
<p><i>Coordination: Follow-Up About Test Results</i> (1 question)</p>	<p>In the last 12 months, when this provider ordered a blood test, x-ray, or other test for your child, how often did someone from this provider's office follow up to give you these results?</p>
<p><i>Coordination: Provider Up to Date About Specialists</i> (1 question)</p>	<p>In the last 12 months, how often did the provider named in Question 1 seem informed and up-to-date about the care your child got from specialists?</p>
<p><i>Information: About Care After Hours</i> (1 question)</p>	<p>Did this provider's office give you information about what to do if your child needed care during evenings, weekends, or holidays?</p>

# The MHQP 2019 Patient Experience Survey

## Questions and Answers

**Note:** This section answers general questions about the survey. Detailed information about statistical methods behind survey administration and scoring can be found in the Technical Appendix.

### ***What is the MHQP Patient Experience Survey?***

The 2019 MHQP Patient Experience Survey is based on the CG-CAHPS 3.0 survey developed by the National Committee for Quality Assurance (NCQA) and the Agency for Healthcare Research and Quality (AHRQ), and also includes Patient-Centered Medical Home (PCMH) survey items. The 2019 adult and child Patient Experience Surveys (PES) had 39 items and 54 items, respectively.

Prior to using these survey versions, MHQP used longer versions, based on CG-CAHPS 2.0. MHQP arrived at its shorter survey versions based on the following: multi-stakeholder input on what was needed, past years' experience regarding the performance of items and composites, requirements imposed by risk contracts, and Massachusetts PCMH certification requirements. MHQP's surveys are generally consistent with the CG-CAHPS 3.0 versions, but do have minor differences related to the make-up of survey composites; however, all composite questions in the CG-CAHPS 3.0 surveys are included in the MHQP short survey versions.

MHQP's objective in collecting and reporting results of the survey is to provide valid and reliable information to help primary care providers improve the quality of care they deliver to their patients and to help consumers take an active role in making informed decisions about their health care.

### ***Why are patient experiences with care an important component of quality measurement?***

In 2001, the Institute of Medicine report entitled *Crossing the Quality Chasm* first identified patient-centered care as one of the six essential pillars for an outstanding healthcare system. Patient experience surveys have been developed and validated for over 15 years and are now fundamental tools to evaluate patient-centered care and to help clinicians and organizations improve this dimension of health care quality. The measures of patients' care experiences that are available today provide detailed and specific information from patients about both clinical interactions (e.g., communication quality) and organizational features of care (e.g., access to care).

According to a 2014 study in *Medical Care Research and Review*, patient experience surveys are helping to drive improvement in patient-centered care and quality improvement. For example, some of the key characteristics measured in patient experience surveys, such as physician-patient communication, are found to be associated with health outcomes and adherence to recommended care.<sup>1</sup> Evidence from this study also indicated that physicians are becoming increasingly responsive to publicly reported surveys of patient experience and are subsequently motivated to make changes to improve and/or maintain performance. In addition, there are increasing financial incentives tied to these measurements.

---

<sup>1</sup> *Examining the Role of Patient Experience Surveys in Measuring Health Care Quality*; Medical Care Research and Review, 2014; Price RA, Elliott, M, Zaslavsky, A, Hays, R, Lehrman, W, Rybowski, L, Edgman-Levitan, S, Cleary, P.

### ***How is MHQP's Patient Experience Survey funded and how do funders use results?***

Since 2005, the statewide survey and public reporting have been supported by the state's major health plans: Blue Cross Blue Shield of Massachusetts, Harvard Pilgrim Health Care, and Tufts Health Plan. This year, eleven provider organizations, representing nearly half of the state's primary care physicians, added their financial support: Affiliated Pediatric Practices, Lowell General PHO, Mount Auburn Cambridge IPA, New England Quality Care Alliance, Newton Wellesley PHO, Northeast PHO, Partners HealthCare System Inc., Steward Healthcare System, The Pediatric Physicians' Organization at Children's Hospital Boston, Tri-county Medical Associates, and UMass Memorial Healthcare. Additionally, recognizing the value of patient experience information, which is part of the Standard Quality Measure Set (SQMS), the Center for Health Information and Analysis (CHIA), an independent Massachusetts state agency, has purchased PES results in recent years and incorporated them into CHIA's Annual Reports on the Performance of the Massachusetts Health Care System. Continued plan and provider organization support of MHQP's survey efforts has made Massachusetts a leader in this area of health quality measurement. Improving patient experience is now recognized as an essential component of system transformation to patient-centered care, and provider organizations increasingly use patient experience survey results to support quality improvement for performance and recognition programs.

### ***What survey instrument was used?***

The MHQP 2019 Patient Experience Survey Instrument for adults is a 39 question tool and the pediatric version has 54 items. These instruments are based on the CAHPS Patient-Centered Medical Home (PCMH) Survey, developed by the National Committee for Quality Assurance (NCQA) and the Agency for Health Care Research and Quality (AHRQ). The adult survey is designed to be completed by the adult patient of the named primary care provider. The pediatric survey is designed to be completed by the parent or guardian of the child patient of the named primary care provider.

### ***How were the questions and summary measures on these survey instruments developed and validated?***

The survey questions were developed and validated over a period of several years, and build upon work conducted over a 15-year period by a team of internationally recognized survey scientists in the health care field. The primary care survey's conceptual model corresponds to the Institute of Medicine's definition of primary care (1996).<sup>2</sup> Beginning in 2013, new survey questions were added to address measurement of the patient-centered home model of care. These questions are also included in the 2019 instrument. Each survey question has undergone cognitive testing to ensure that the wording is interpreted consistently and is clear to individuals across a wide continuum of English literacy skills. All survey questions and composite measures have undergone extensive psychometric testing to ensure reliability, validity, and data quality.

### ***Why is MHQP collecting patient comments?***

MHQP routinely captures free-text information in a systematic way. Specifically, we incorporate the beta version of the CAHPS Narrative Elicitation Protocol, which is a set of open-ended questions that prompts survey respondents to tell a clear and comprehensive story about their experience with a health care provider. The ultimate objective of obtaining patient comments is to provide additional, more textured information to help providers and practices understand what they can do to improve their care and/or continue with strategies that are positively impacting patients' experiences.

---

<sup>2</sup> *Primary Care: America's Health in a New Era*; National Academy Press, 1996; Donaldson, M. S., Yordy, K. D., Lohr, K. N., & Vanselow, N. A.

### ***How was my practice selected to be included in the survey?***

To be included in the survey, practices were required to have at least three eligible primary care providers of the same specialty (adult or pediatric), each having a panel size of at least 20 eligible patients across the participating health plans. Solo and dual practice sites were only included in the survey if they or their provider organization opted to fund the sampling of their patients. These solo and dual practices will not be included in MHQP's public reporting of the survey results. Practice site groupings are based on where providers were practicing as of December 31, 2018.

### ***I did not receive results for certain practices and providers. Why?***

For private reporting, results are included for practices with at least **16** respondents. This minimum threshold allows practices to receive some information from the survey, even when sample sizes are limited. For provider level reports, results are included for providers with at least **seven** respondents. There are no minimum thresholds for the reporting of medical groups or networks.

### ***How many patients were selected to participate in the survey?***

The survey was sent to over 190,000 adult patients and to the parents of over 114,000 children.

### ***What was the overall response rate to the survey?***

The overall response rate to the survey was 19.47%. This response rate is typical for recent large scale surveys of this kind and is similar to response rates achieved in other regional health care survey efforts. The response rate in 2018 was 19.16%. The decline in response rates for traditional survey administration via mailed paper-based instruments points to the need to develop valid electronic surveys. In our statewide provider level survey, the response rate for those who received an e-mail invitation and completed the survey was 29.25%. This figure is substantially higher than the response rate from our traditional mailed survey and underscores the importance of moving in new directions towards electronic surveying.

### ***What is the value of using e-mails?***

E-mails return higher response rates and are less costly than traditional mail surveys. In addition, emails enable respondents to take the survey online in non-English languages (i.e., Chinese, Portuguese, Russian, and Spanish) and provide comments to a series of open-ended questions.

### ***Isn't it true that the most disgruntled patients are the ones who respond to surveys like this—so the results are not a fair representation of patient experiences?***

Several decades of survey research show that the reverse is true. When a survey is administered using the protocol applied here (mailing/e-mail, with mail follow-up of non-respondents), patients with more favorable care experiences are more likely to respond than those who are disgruntled. In fact, patients who respond sooner to our survey consistently rate their provider with higher scores than patients who respond later. There is strong and consistent evidence that patients who have the most negative care experiences are *less* likely to respond, and are therefore under-represented in surveys of this type.

### ***When will MHQP publicly report 2019 PES results?***

MHQP will publicly report practice site results in the winter of 2020 on MHQP's website for healthcare consumers, [www.healthcarecompassma.org](http://www.healthcarecompassma.org). MHQP will allow all provider organizations across the state that did not contribute financially to this PES project to review their results shortly before the public report. Network, medical group, and individual provider results **will not** be publicly reported by MHQP.

***Do you need a certain number of responses to be publicly reported on the website?***

Yes, a practice site needs a minimum of 16 responses to be included.

***Do you need a certain number of reportable composites in order to be included on the website?***

Yes, you need at least two composites with a reliability of 0.70 or greater to be included; willingness to recommend is counted as one of the two composites.

***How can I find out more about the MHQP Patient Experience Survey?***

MHQP maintains an organizational website; [www.mhqp.org](http://www.mhqp.org), that includes updates on our Patient Experience initiatives. MHQP also maintains a consumer-friendly public reporting website, [www.healthcarecompassma.org](http://www.healthcarecompassma.org), that hosts the publicly reported survey results. Questions may be directed to Amy Stern, Sr. Project Manager for Patient Experience Surveys at [astern@mhqp.org](mailto:astern@mhqp.org).

# The MHQP 2019 Patient Experience Survey

## Technical Appendix

### *Overview*

MHQP's 2019 Patient Experience Survey was conducted in the spring of 2019 and included patients sampled from commercial adult and pediatric practice sites in MHQP's Massachusetts Provider Database (MPD) with at least three primary care providers (PCPs). The survey asked patients to report about their experiences with a particular named primary care provider and his or her practice.

### *Survey Instrument*

The 2019 MHQP Patient Experience Survey is based on the CG-CAHPS 3.0 survey developed by the National Committee for Quality Assurance (NCQA) and the Agency for Healthcare Research and Quality (AHRQ), and also includes Patient-Centered Medical Home (PCMH) survey items. The 2019 adult and child Patient Experience Surveys (PES) had 39 items and 54 items, respectively.

Prior to using these survey versions, MHQP used longer versions, based on CG-CAHPS 2.0. MHQP arrived at its shorter survey versions based on the following: multi-stakeholder input on what was needed, past years' experience regarding the performance of items and composites, requirements imposed by risk contracts, and Massachusetts PCMH certification requirements. MHQP's surveys are generally consistent with the CG-CAHPS 3.0 versions, but do have minor differences related to the make-up of survey composites; however, all composite questions in the CG-CAHPS 3.0 surveys are included in the MHQP short survey versions.

### *Eligible Providers and Practice Sites*

Over the past decade of its measurement work, MHQP has developed a Massachusetts Provider Database (MPD). The MPD is a unique data source that allows mapping of primary care providers, nurse practitioners, and physician assistants to the locations where they provide care. The MPD includes providers' organizational hierarchy and links to health plan data from Massachusetts' four largest commercial plans. Plans and provider organizations update MHQP's MPD information on an annual basis just prior to survey administration. Practice-site groupings are based on where a provider was practicing as of December 31, 2018. Changes in practice-site composition after this date are not reflected in the 2019 MHQP survey.

Physicians with primary care specialty designations of Internal Medicine, Pediatric, Family Medicine or General Medicine and practicing as primary care providers are eligible for the survey. Nurse practitioners and physician assistants practicing as primary care providers are also included. Providers must also have a panel size of at least 20 eligible patients across the participating health plans to be included in the survey.

Practices having at least three providers meeting the above eligibility criteria are included the statewide survey. Once a practice has at least three PCPs eligible for the survey, any remaining PCPs having at least 20 patients are included in the practice-level sample. Using health plan claims visit data, each provider is classified as either "adult" or "child," based on

the age of the majority of his or her patients in the sample pool (child=ages 0-17; adult=ages 18 and older). Practice sites are also classified as follows:

- Practice sites are classified as "adult" if there are three or more providers, each with 20 or more eligible adult patients. Practice sites are classified as "child" if there are three or more providers, each with 20 or more eligible child patients. Practice sites are classified as "mixed" if they meet both sets of criteria (adult and child practice site) and the smaller population must be at least 25 percent of the total patient panel.
- Based on the number of adult and pediatric providers within each practice site, the composition of the survey sample(s) is drawn using the following criteria (applied in the order listed):
  1. If a practice site was classified as "mixed", two patient samples were drawn, consisting of adult and child patients; and
  2. If a practice site was either "adult" or "child" (but not mixed), a single survey sample was drawn consisting of adult or child.

## ***Eligible Patients***

The adult and pediatric patients surveyed for each provider were randomly drawn based on visit and membership data from the participating health plans. To be eligible for surveying, patients had to meet the following criteria:

- Current enrollment in one of the participating commercial health plans;
- Commercial member in an HMO, POS, or PPO health plan product;
- Age 18 and older to receive an adult survey;
- Age 17 or younger to receive a pediatric survey; and
- Patients of Massachusetts primary care providers.

MHQP used both visit data and health plan membership data to link patients to their primary care providers. The attribution methodology considers whether the patient received primary care services, and how often and recently the patient saw the primary care provider. Once patients had been assigned to providers, patients are aggregated across health plans at the provider level and then the practice level.

To ensure that only active patients of a provider were included in analysis and data reports, the survey instrument included some initial questions that served to confirm the following:

- The patient considered the provider named on the survey to be his or her primary care provider (adult survey) or his or her child's primary provider (pediatric survey); and
- The patient had at least one visit with that provider in the previous 12 months.

Responses of patients who reported that the named provider was not their (or their child's) primary provider and/or reported having no visits with that provider in the past 12 months were not included in the analysis completed for this report.

## ***Survey Sampling***

Sample sizes are designed to provide information at the *practice-site level*. Site-level surveys do not survey enough patients to reliably measure each provider's performance. For this reason, some provider organizations elected to purchase additional surveys to obtain provider-level results. Provider-level results are not publicly reported.

MHQP uses a variable sampling protocol based on the type (adult or pediatric) and size of the practice site being surveyed. Previous survey analyses have demonstrated that the individual provider is a larger source of variation than the practice site for most measures. Therefore, the number of patients required to obtain reliable and stable information about a practice site increases with the number of providers at a site.

At each practice site, starting samples were drawn by randomly sampling an equal number of patients from each provider's panel. A range of the targeted number of completed surveys and initial sample sizes are provided in the table below. Statistical analysis indicated that larger samples sizes were needed to obtain statistically reliable results for pediatric practices, in part because there is less variability in performance among pediatric practices.

*Table 1 - Variable Sample Sizes*

<b>Number of Providers per site</b>	<b>Starting sample – Adult survey (assuming 20.6% mail response rate)</b>	<b>Starting sample – Pediatric survey (assuming 15.5% mail response rate)</b>
3	277	607
4-9	331-496	723-1,084
10-13	515-564	1,130-1,239
14-19	578-627	1,265-1,375
20-28	636-680	1,394-1,491
29-55	685-734	1,497-1,633

## ***Survey Administration***

### ***Core sample of patients for the core survey***

This year, both e-mail and mail protocols were used in the core survey. The Center for the Study of Services (CSS), the survey vendor, mailed up to two surveys to each patient in the sample through non-profit mail. Non-respondents to the first survey mailing were sent a second survey package, identical to the first, five weeks after the initial mailing. The initial personalized mailing package included:

- A cover letter to the patient explaining the survey and its importance;
- A web address for the patient to access the survey on the internet; and
- A paper copy of the survey.

The sender of the mail surveys was identified as both the plan and MHQP on the outside of the envelope.

The cover letter was signed by MHQP's President & CEO and the signature of an official from the patient's health plan. The bottom of the letter also included a note in Spanish, Russian, Portuguese, and Chinese to inform sample members that they had the option to complete the survey online in one of the non-English languages. Patients were given the option of responding through the mail or going to a website and completing the survey online.

### ***Sampled patients with e-mail addresses***

Patients selected for the statewide level survey who had a valid e-mail address were sent up to three e-mail invitations to the survey. MHQP sent e-mail invitations with a link to the online survey to 14% of the sampled population. The response rate for those who received e-mails and completed the survey was 29.25% as compared with a response rate of 17.8% for mailed surveys. E-mails came from two provider organizations and one health plan. We plan to field future

surveys using technology and approaches that patients prefer while also allowing us to achieve valid results more cost effectively. We are working with provider organizations and health plans to implement these changes.

We conducted our standard random survey sampling of all eligible patients regardless of whether or not the patient had an e-mail address listed. The survey vendor then selected a random sample of these patients to be surveyed. This is the standard process we have used for sampling since 2005. If the patient who was randomly selected as part of the core sample had an e-mail address, we sent the survey via e-mail invitation to complete the survey online. Patients without an e-mail address were mailed the survey using our traditional two-wave mail protocol. Once the core sample was selected, we then randomly selected additional sample members for provider-level sampling. For this expanded sample, those with an e-mail address were sent an e-mail invitation to complete the survey online. Patients without an e-mail address were mailed the survey using our traditional two-wave mail protocol. Finally, patients who were sent the survey via e-mail, but did not respond, were sent a follow-up mailed survey. A subset of sampled patients was sent a second survey in the mail. This additional survey mailing was limited to providers with relatively low e-mail response rates.

### ***Survey Reliability***

All survey questions and summary measures have undergone extensive psychometric testing. A key criterion by which all survey measures were evaluated is their site level reliability. Site-level reliability is a metric that indicates how accurately a survey measure captures information about a particular practice site. Specifically, the site-level reliability coefficient indicates the extent to which patients of a given practice site report similarly about their experiences with that practice. In other words, site-level reliability indicates the consistency of the information provided by patients of a given practice site. Reliability scores range from 0.0 to 1.0 where:

- 1.0 signifies a measure for which every patient of the site reports an experience identical to every other patient in the practice; and
- 0.0 signifies a measure for which there is no consistency or commonality of experiences reported by patients of a given practice.

Targeted sample sizes were designed to achieve results with very high site-level reliability (0.70 or higher), in accordance with psychometric standards and principles. For all measures except those with very high overall performance, **site-level results must achieve a reliability threshold of 0.70 to be publicly reported.**

### ***Performance Categories for Public Reporting***

In order to allow Massachusetts practices to measure their performance against stable benchmarks from year to year, MHQP had used the same performance categories between 2013 and 2017. In 2018 we created new benchmarks in order to: 1) reflect changes to our survey instrument- i.e., we are using a shorter form survey instrument and some composites have changed slightly, and 2) update standards that are reflective of how practices are performing today. These benchmarks have not changed in 2019.

MHQP uses three methodologies to develop performance benchmarks depending on the amount of discrimination between practice scores:

- The first statistical methodology, known as the Beta-Binomial method, fits performance data to a theoretical model that has been shown to fit the distribution of performance scores well. In this model, the true distribution of scores (if they could be measured without error) would follow a normalized beta distribution. Classification is based on the calculated 20<sup>th</sup> and 80<sup>th</sup> percentiles of the beta distribution. The relative performance levels differentiate those practices that are truly higher or lower in performance than those practices in the middle range of performance with relatively low error rates. Measures whose classification is based on observed

relative performance percentiles include Adult Knowledge of Patient, Adult Behavioral Health, Adult/Pediatric Organizational Access, Pediatric Preventive Care, and Adult/Pediatric Office Staff.

- When it is difficult to properly classify most practices using the Beta-Binomial method, a second method of performance classification is used. The Hochberg method, named after the statistician who developed it, is the method MHQP uses for these measures. This method defines performance level by comparing practice performance with median performance. Practice scores are statistically evaluated to determine whether they are close enough to the median practice score to be in the middle category or significantly higher or lower than the median practice score, after accounting for multiple comparisons. Cut-points are defined by determining the exact point at which no practice is significantly lower than or higher than the median. Measures whose classification is based on the Hochberg method include Adult/Pediatric Communication, Adult/Pediatric Integration of Care, Pediatric Knowledge of Patient, Child Development, and Adult/Pediatric Self-Management Support.
- For measures with high overall performance, MHQP has moved both the middle and high range of performance into the high performance category, and set a benchmark judged by experts to be suitably excellent. All Hochberg measures are classified in this manner, with the exception of Adult and Pediatric Self-Management Support. Since overall performance is low for Self-Management, the middle and high performance categories are combined into the middle performance category.

Cut-points are set in the baseline year (originally 2013 and now 2018) and used in subsequent years in order to give practices a consistent achievement target. In subsequent years, measures based on Beta-Binomial methods are evaluated using the established cut-points if enough practices can be classified with 70% reliability. All other measures are classified using a combination of the established benchmarks and the Hochberg method. A practice is classified as below average if it is below the established low cut-point and is statistically significant using the multiple-comparison Hochberg method. Similarly, practices above the upper cut-point are classified as above average if they are significantly above the upper cut-point. Practices are classified as average if their scores lie between the two cut-points and they have enough patients to be reasonably sure that their scores lie in the middle range. All other practices lack a sufficient number of patients to be classified as described.

MHQP will publicly report practice site results for patient experience in the winter of 2020 on its website for healthcare consumers, [www.healthcarecompassma.org](http://www.healthcarecompassma.org).

### ***Misclassification Risk and Buffer Zones***

MHQP's public reporting establishes performance categories so that meaningful differences in performance among practices are represented. The number of performance categories is limited in order to highlight differences and reduce the chance that a practice could be misclassified in a category that is lower than it should be. For measures using observed relative performance benchmarks, MHQP also defines a buffer zone around each performance cut-point to further reduce the possibility of incorrectly categorizing a practice in a lower category. The Hochberg method protects against misclassification through a statistical process which reduces the chance of error. Therefore, measures using this method to set benchmarks do not require buffers.

### ***“Top Performance” Designation***

MHQP continues to identify practices achieving the highest level of performance in private and public reporting. Practices reaching this level of performance were identified using the Beta-Binomial method. Practices achieving “Highest Performance” designation are at or above the 99<sup>th</sup> percentile of the Beta-Binomial distribution for a given measure. The Beta-Binomial 99<sup>th</sup> percentile can be used to set achievable quality improvement goals for existing measures.

The highest performance designation point value for measures is provided below.

***Table 2 – Highest Performance Designation Thresholds***

	<b>Measure</b>	<b>Score Needed for “Highest Performance” Designation</b>
<b>Adult</b>	Communication	98.1
	Integration of Care	93.3
	Knowledge of Patient	95.5
	Adult Behavioral Health	88.9
	Organizational Access	94.1
	Self-Management Support	74.0
	Office Staff	94.9
<b>Pediatric</b>	Communication	99.0
	Knowledge of Patient	96.7
	Pediatric Preventive Care	87.3
	Child Development	86.6
	Organizational Access	97.3
	Self-Management Support	63.1
	Office Staff	97.6

Below are some frequently asked questions regarding statistical and methodological terms and analytic procedures used in scoring the data.

***Sampling thresholds- what are they and how are they determined?***

Table 3 – PES Sampling Thresholds

2019 PES Sampling Thresholds	
Provider-Level	<ul style="list-style-type: none"> <li>• Ideal: 140 adult patients/provider and 140 pediatric patients/provider, however will include providers with 90 patients or more.</li> <li>• The provider organization can request samples &lt;90 in their contract however, the provider being sampled must have at least 20 patients.</li> </ul>
Practice-Level	<ul style="list-style-type: none"> <li>• Practice must have 3+ providers.</li> <li>• Depending on how many providers practice at the site, the practice must meet the sample size threshold (See Table 1).</li> <li>• Any one provider must have at least 20 patients to be included as part of the 3+ practice site.</li> </ul>
Practices Serving Both Adult and Pediatric Patients	<ul style="list-style-type: none"> <li>• If a practice serves both adult and pediatric patients, at least 25% of their patients must be in the second patient population to be surveyed.</li> </ul>

***How were sampling thresholds for the Provider-Level Survey (PLS) Program determined?***

After the practice level sample is drawn, the provider level sample is drawn to add respondents, which allows for calculation of meaningful provider level results. For example, for an adult practice with three providers, we target a practice level sample size of 277, about 92 patients per provider. If the three providers at that practice were included in the provider level sample, we would then draw an additional sample of 48 patients per provider so each provider would have a total sample size of 140.

***How is the willingness to recommend correlation calculated for each composite measure?***

Each composite measure is ranked on a 0-100 scale (see the practice's adjusted mean score for that composite). We use the Pearson correlation coefficient to determine if the score on willingness to recommend is significantly correlated with each composite. If performance on the composite measure is correlated with willingness to recommend at the 0.45 level, we consider that the measure influences patients' willingness to recommend the provider.

***What is case-mix adjustment and why do you adjust for patient characteristics?***

Certain patient characteristics that are not under the control of the provider, such as age and education, may be related to the patient's survey responses. For example, several studies have found that younger and more educated patients provide less positive evaluations of healthcare. If such differences occur, it is necessary to adjust for such respondent characteristics before comparing providers' results. The goal of adjusting for patient characteristics is to estimate how different providers' scores would be if they all provided care to comparable groups of patients. Case-mix adjustment allows for comparability of providers without different patient characteristics confounding the results. We provide adjusted results for public reporting and pay-for-performance financial incentive programs. Proper adjustment for differences in patient characteristics is critical to ensure fair comparisons across health care providers serving different patient populations.

### ***What variables are used in case-mix adjustment and how are they selected?***

In MHQP's results, scores have been case-mix adjusted so that patient characteristics match the overall characteristics of patients throughout the state as reflected in the statewide results, creating a fair comparison of performance. In developing our case-mix adjustment model, we sought important and statistically significant predictors of patients' reports of their experiences. Research has shown that practices with younger patients, more ethnic minority patients and patients living in more socioeconomically deprived areas are more likely to gain from case-mix adjustment. Age and race/ethnicity are the most influential adjusters. Results data are adjusted according to age, gender, education, race, language, health plan, and region.

### ***Why are other variables not used in the case-mix adjustment equation?***

Other variables are not used because they do not have a significant impact on results. For example, our research showed that e-mail had no case-mix adjustment utility. In addition, the length of time one has seen the provider and the number of visits one has had with the provider/practice has no case-mix adjustment utility as reported by the CAHPS team.

### ***What is the adjusted mean score?***

The adjusted mean score is the mean score of an item that has been case-mix adjusted by sociodemographic characteristics and patient-reported health status.

### ***How are the survey responses scored?***

All survey responses are coded to a 0 to 100 scale so that questions with different response options may be easily combined. Higher values indicate more positive responses.

For example, a question with four response options would be assigned the following values:

Response	Value
Always	= 100.00
Usually	= 66.67
Sometimes	= 33.33
Never	= 0.00

A question with two response options would be assigned the following values:

Response	Value
Yes	= 100.00
No	= 0.00

Composites are calculated as a simple average of the response values for each of the component questions. If fewer than half of the questions have valid responses for a given survey respondent, then the composite cannot be calculated and is considered missing.

For example, a composite that is comprised of five questions would be calculated as follows:

	Q1	Q2	Q3	Q4	Q5	Composite
Respondent A	66.67	66.67	0.00	.	.	44.45
Respondent B	100.00	66.07	100.00	100.00	100.00	93.21
Respondent C	100.00	100.00	100.00	66.67	66.67	86.67
Respondent D	33.33	.	.	66.67	.	.
Respondent E	66.67	100.00	50.00	100.00	66.67	76.67

## Acknowledgments

MHQP would like to thank all the individuals whose expertise, hard work, and commitment to exacting standards of measurement and reporting contributed to bringing the 2019 Statewide Patient Experience Survey to fruition.

We are especially grateful to MHQP's Physician Council, Health Plan Council, and Consumer Health Council for their insights and advice on all of MHQP's quality measurement initiatives. Their guidance is invaluable in helping MHQP fulfill its goal of providing valid and actionable patient experience data to Massachusetts providers.

Further, we would like to acknowledge MHQP's Board of Directors for their foresight and willingness to undertake groundbreaking initiatives that improve the quality of care provided in Massachusetts.

We are very grateful for our partners from the participating health plans: Blue Cross Blue Shield of Massachusetts, Harvard Pilgrim Health Care, and Tufts Health Plan, for providing their time, expertise, and data resources, without which this project would not have been possible.

We are also grateful to the following provider organizations that partnered with us: Affiliated Pediatric Practices, Lowell General PHO, Mount Auburn Cambridge IPA, New England Quality Care Alliance, Newton Wellesley PHO, Northeast PHO, Partners HealthCare System Inc., Steward Healthcare System, The Pediatric Physicians' Organization at Children's Hospital Boston, Tri-county Medical Associates, and UMass Memorial Healthcare.

Special thanks and recognition go to Bill Rogers for his methodological leadership and expertise; Hong Chang for his statistical analysis; and Paul Kallaur, Jacqueline Cho, and Travis Gervais at the Center for the Study of Services for their professional management of survey administration.

Finally, we are indebted to the MHQP staff who worked so hard to develop this project and create this report – Amy Stern, Raji Rajan, Jim Courtemanche, Jason Leistikow, and Emily Berk.

## About MHQP

Since 1995, MHQP has been leveraging its unique position as an independent coalition of key stakeholder groups (providers, payers and patients) in Massachusetts healthcare to help provider organizations, health plans, and policy makers improve the quality of patient care experiences throughout the state.

We do this by:

- 1. Measuring and publicly reporting non-biased, trusted and comparable patient experience data;**
- 2. Sharing tools, guidelines and best practices to help support improvement efforts; and**
- 3. Catalyzing collaboration to find breakthrough solutions to shared challenges.**

MHQP's work is driven by and organized around the principle that the challenges facing healthcare can only be solved through collaboration and innovation across key stakeholder groups – including patients, whom we believe are the most underutilized resources in the healthcare system. MHQP is the neutral body that brings these organizations and individuals together to find shared interests and solve problems that none can solve alone.

## MHQP Board of Directors 2019

**James Roosevelt, Jr., JD**

Counsel  
Verrill Dana LLP  
*Chair, Board of Directors*

**Barbara Spivak, MD**

President and CEO  
Mount Auburn Cambridge Independent Practice  
Association  
*Vice Chair, Board of Directors*  
*MHQP Physician Council*

**Lois Cornell, JD**

Executive Vice President  
Massachusetts Medical Society

**Michelle Davis**

Chief Marketing Officer  
Wentworth Institute of Technology

**Nancy Finn**

Healthcare Journalist & Author  
Communications Resources  
*MHQP Consumer Health Council*

**Eileen McAnneny**

President  
Massachusetts Taxpayers Foundation

**John Moore, MD, PhD**

Medical Director  
Fitbit, Inc.

**Lucilia Prates**

Director, MA Senior Medicare Patrol Program  
Elder Services of Merrimack Valley  
*Chair, MHQP Consumer Health Council*

**Barbra Rabson, MPH**

President and CEO  
Massachusetts Health Quality Partners  
*Ex-Officio Member*

**Meredith Rosenthal, PhD**

Professor of Health Economics and Policy  
Senior Associate Dean for Academic Affairs  
Harvard T.H. Chan School of Public Health

**Thomas Scornavacca, DO**

Senior Medical Director  
UMass Memorial Population Health  
*Chair, MHQP Physician Council*

**Richard B. Siegrist, Jr., MS, MBA, CPA**

Director of Innovation and Entrepreneurship  
Department of Health Policy and Management  
Harvard T.H. Chan School of Public Health

**Patricia Toro, MD, MPH**

Associate Medical Director  
Harvard Pilgrim Health Care  
*Chair, MHQP Health Plan Council*

**Jean Yang, MBA**

President of Public Plans  
Tufts Health Plan  
*MHQP Health Plan Council*

## MHQP Physician Council Members 2019

**Thomas Scornavacca, DO\***

Senior Medical Director  
UMass Memorial Population Health  
*Chair, MHQP Physician Council*

**Kim Ariyabuddhiphongs, MD**

Associate Chief Medical Officer – Southern Region  
Beth Israel Lahey Performance Network (BILPN)

**Nicholas Cordella, MD, MSc**

Associate Director of Quality Strategy  
Boston Medical Center

**Christian Dankers, MD**

Associate Chief Quality and Safety Officer  
Partners HealthCare

**Jatin Dave, MD**

Chief Medical Officer  
New England Quality Care Alliance

**Steven Defossez, MD, EMHL, CPE**

Vice President, Clinical Integration  
Massachusetts Health & Hospital Association

**David Elvin, MD**

Senior Medical Director Accountable Care Organization  
Cambridge Health Alliance

**Jonathan Hatoun, MD, MPH, MS**

Associate Medical Director  
Pediatric Physicians' Organization at Children's

**Thomas Isaac, MD, MBA, MPH**

Medical Director of Quality within Clinical Performance  
Excellence  
Atrius Health

**Deborah Kovacs, MD**

Chief of Medicine  
Action Medical Associates

**Benjamin Kruskal, MD, PhD**

Medical Director  
Performance Excellence  
New England Quality Care Alliance

**Mark Mandell, MD**

Chief Pediatric Medical Officer  
Steward Health Care Network

**Judith Melin, MA, MD**

Associated Chief Quality & Safety Officer  
Lahey Health

**Yael R. Miller, MBA**

Director of Practice Management & Medical Economics  
Massachusetts Medical Society

**Julita Mir, MD**

Chief Medical Officer  
Community Care Cooperative

**James Moses, MD, MPH**

Vice President of Quality and Safety,  
Chief Quality Officer  
Boston Medical Center

**Charles Rollinger, MD, MPH**

Senior Medical Director, Insurance Products  
Steward Health Care Systems LLC

**Barbara Spivak, MD\***

President  
Mount Auburn Cambridge IPA

*\* MHQP Board Representative*

## MHQP Health Plan Council Members 2019

**Patricia Toro, MD, MPH\***

Associate Medical Director  
Harvard Pilgrim Health Care  
*Chair, Health Plan Council*

**Linda Brenner**

Director, Quality Measurement and Performance  
Tufts Health Plan

**Kenneth Duckworth, MD**

Medical Director, Behavioral Health  
Blue Cross Blue Shield of MA

**Beth Foley, RN, M.Ed**

Vice President, Quality and Clinical Operations  
Fallon Health

**Carolyn Langer, MD**

Chief Medical Officer  
Fallon Health

**Angela Li, MPH**

Director, Performance  
Measurement & Improvement  
Blue Cross Blue Shield of MA

**Jill Morrow-Gorton, MD, MBA**

Acting Chief Medical Director  
Commonwealth Medicine

**Lisa Scarfo, MD**

Medical Director  
Neighborhood Health Plan

**Linda Shaughnessy, MBA**

Director, MassHealth Quality Office  
MassHealth

**Jean Yang\***

President of Public Plans  
Tufts Health Plan

*\*MHQP Board Representative*

## MHQP Consumer Health Council 2019

**Lucilia Prates\***

Director, MA Senior Medicare Patrol Program  
Elder Services of Merrimack Valley  
*Chair, MHQP Consumer Health Council*

**Judy Danielson**

Health Market Strategy Consultant

**Nancy Finn\***

Healthcare Journalist & Author  
Communications Resources

**Denice Garrett**

Coordinator for Clinical Billing and Data Operations  
Action for Boston Community Development, Inc.

**Cyrus Hopkins**

Retired

**Rosalind Joffe**

President
