# Beverly Hospital Hernia Center

Specialized care and minimally invasive  
robotic surgery for hernia patients

## Beverly Hospital Hernia Center offers a personalized approach to care.

**We are proud to now offer minimally invasive robotic assisted surgery. Our center provides comprehensive services to manage all types of hernias, including the latest surgical techniques.**

**The benefits of robotic surgery include:**

- **Less pain after surgery**
- **Less invasive management of complex hernias**
- **Shorter recovery time**

Symptoms of a hernia can include a visible bulge, pain or discomfort, a feeling of weakness or pressure, as well as a burning or aching sensation in the affected area. If you believe you may have a hernia or have been recently diagnosed, don't delay your care.

Our team is dedicated to supporting patients with hernias and offering individualized care from their very first visit through treatment and recovery.

**Call your primary care provider or 978-712-1570 to connect with one of our hernia experts.**
